ADMINISTRATION

Administration Workstation: README

Who this is for: Workspace administrators.

Authoritative, audited control of RideArrivo identity, people, security, workstations, performance, equipment and access. Everything you do here is logged, and you can see more than most people. Work carefully.

1. Your first 15 minutes

- Sign in and check the Dashboard: notifications, what needs your attention and your tasks.
- Open this workstation from the left menu and read the section list below once.
- Find your colleagues in Chat and say hello in the department room.
- Open ROOM 7 and note where meetings start, so the first call is not a scramble.

2. What you can do here

Area	What it is for
People and access	Create and review accounts, roles and department membership. Remove access the day someone leaves.
Letterhead access	Choose who may issue official letterhead documents, and review what was issued.
AI Management	Review proposals from the Knowledge Manager before anything is published to the Knowledge Base.
Chat administration	Manage rooms and moderate where required.
Backups and operations	Check that scheduled backups ran and review operational exports.
Devices and equipment	Track company equipment and who holds it.
Performance	See delivery KPIs and how they are measured.

3. A working day

Start of day

- Open Administration and read the overview for anything flagged.
- Check Backups for yesterday's run.
- Review new sign-ups and pending access requests.

During the day

- Give the least access that does the job, and write the reason when you change a role.
- Review AI Management proposals against their sources before approving.
- Use the audit trail to answer "who changed this".

End of day

- Leave no access request half done.

- Sign out of Administration when finished.

4. Security and handling

- **Your login is yours.** Never share it, and never sign in on a shared or public computer. Use **Keep me signed in** only on a device that only you use.
- **Lock or sign out** when you step away. Use the sign-out option at the end of the day.
- **Customer and company data stays in company tools.** Do not copy it into personal email, personal cloud drives or chat apps outside RideArrivo.
- **Company Files downloads need approval.** Open documents in the workspace first. Request a download only when you truly need the original.
- **Report problems early.** A lost device, a suspicious email or a wrong access level is reported to Administration the same day.

> **For this department**
> • Admin access is powerful. Never share it and never use it on a shared device.
> • Remove leavers' access the same day.
> • Guide PDFs cannot be replaced from the app. Changes go through the engineering team.

5. Getting help

Ask in your department room in Chat first. For access, accounts or anything that looks wrong with the workspace itself, message Administration with a screenshot and the time it happened. If you think your account or a device has been compromised, say so at once.

Read-only guide, published by the engineering team. Version 3.0. If the app and this guide disagree, the app is right; tell Administration so the guide can be corrected.
