OPERATIONS

Mobility Operations Workstation · ArrivoOps: README

Who this is for: Dispatchers, fleet and airport coordinators, and operations leads.

ArrivoOps coordinates the physical RideArrivo service from booking readiness through trip completion, governed spend and incident resolution. Dispatch, trip execution, fleet readiness, drivers, incidents and operating control.

1. Your first 15 minutes

- Sign in and check the Dashboard: notifications, what needs your attention and your tasks.
- Open this workstation from the left menu and read the section list below once.
- Find your colleagues in Chat and say hello in the department room.
- Open ROOM 7 and note where meetings start, so the first call is not a scramble.

2. What you can do here

Area	What it is for
ArrivoOps Control Centre	Unified operational execution for dispatch readiness, drivers, fleet, airport operations, incidents and governed spend.
Dispatch Board	Booking allocation, driver matching, assignment ownership and exception handling.
Live Trips & GPS	Active journey state, location health, ETAs and operational exceptions.
Driver Assignment	Availability, shift/vehicle assignment, readiness and accountability.
Fleet Maintenance	Preventive maintenance, work orders, defects, downtime and service history.
Inspections & Documents	Vehicle inspections, papers, insurance, permits and expiry control.
Airport Operations	Flight status, arrival alerts, pickup staging and delay/cancellation handling.
Safety & Incidents	Incident capture, severity, evidence, response, investigation and corrective action.
Fuel & Utilisation	Vehicle utilisation, fuel/energy cost signals, idle time and capacity planning.
Shift & Handover	Operational rosters, coverage, handover notes and unresolved exceptions.
Operations Analytics	Assignment time, completion, cancellations, utilisation and service-quality KPIs.

3. Tools and shortcuts

Tools open in a new browser tab and use your own sign-in to that service. Request access from Administration if one is missing.

Tool or link	Use it for
ArrivoOps Live Dispatch	Connected RideArrivo backend for live bookings, riders, drivers, trips and operational status.

Tool or link	Use it for
ArrivoOps Ride Desk	Your rides with the rider and driver profiles, in-app calling by name and who is on duty.
Google Maps	Routing, pickup points, geocoding and traffic context.
FlightAware	Flight status and alert context for airport pickup operations.
FlightRadar24	Live flight movement cross-check for airport operations.

4. A working day

Start of day

- Open the ArrivoOps Control Centre and review today's trips, drivers on shift and any vehicle flagged for maintenance.
- Check Inspections & Documents for expiring papers.
- Read the Shift & Handover note.

During the day

- Use the Dispatch Board and Live Trips & GPS to watch trips; assign or reassign drivers in Driver Assignment.
- Use FlightAware and FlightRadar24 to confirm arrival times for airport pickups.
- Log every incident in Safety & Incidents the moment it happens.

End of day

- Complete the Shift & Handover note with open trips, issues and anything you told a driver.
- Record fuel and utilisation figures while the day is fresh.

5. Security and handling

- **Your login is yours.** Never share it, and never sign in on a shared or public computer. Use **Keep me signed in** only on a device that only you use.
- **Lock or sign out** when you step away. Use the sign-out option at the end of the day.
- **Customer and company data stays in company tools.** Do not copy it into personal email, personal cloud drives or chat apps outside RideArrivo.
- **Company Files downloads need approval.** Open documents in the workspace first. Request a download only when you truly need the original.
- **Report problems early.** A lost device, a suspicious email or a wrong access level is reported to Administration the same day.

For this department

• Driver and rider locations are sensitive. Share them only with people who need them to complete a trip.
• Share the RideArrivo Driver Guide (the second guide on this page) with every new driver.

6. Getting help

Ask in your department room in Chat first. For access, accounts or anything that looks wrong with the workspace itself, message Administration with a screenshot and the time it happened. If you think your account or a device has been compromised, say so at once.

Read-only guide, published by the engineering team. Version 3.0. If the app and this guide disagree, the app is right; tell Administration so the guide can be corrected.
