SUPPORT TEAM

Customer Support Workstation: README

Who this is for: Customer support agents and team leads.

Everything required to resolve rider and booking issues while maintaining service context and escalation history. Customer assistance, booking context, trip support, escalation and service recovery.

1. Your first 15 minutes

- Sign in and check the Dashboard: notifications, what needs your attention and your tasks.
- Open this workstation from the left menu and read the section list below once.
- Find your colleagues in Chat and say hello in the department room.
- Open ROOM 7 and note where meetings start, so the first call is not a scramble.

2. What you can do here

Area	What it is for
Omnichannel Queue	Email, WhatsApp and other support requests consolidated into one prioritised queue.
Ticketing & SLA	Ownership, priority, routing, first-response targets, resolution clocks and escalations.
Customer 360	Rider profile, bookings, payments, communication history and prior support context.
Live Ride Context	Bookings, rides, drivers and operational exceptions from the RideArrivo backend.
Refund & Dispute Handoff	Structured handoff to Finance for refunds, payment disputes and evidence.
Safety Escalation	Panic/safety incidents routed to Operations with severity and audit trail.
Knowledge & Macros	Approved responses, procedures, troubleshooting and reusable service guidance.
CSAT & Quality	Customer feedback, resolution quality, repeat-contact patterns and coaching signals.
Capacity & Scheduling	Agent availability, workload, handovers and queue coverage.

3. Tools and shortcuts

Tools open in a new browser tab and use your own sign-in to that service. Request access from Administration if one is missing.

Tool or link	Use it for
ArrivoOps Ride Desk	Your rides with the rider and driver profiles, in-app calling by name and who is on duty.
HubSpot Help Desk	Omnichannel ticketing, SLA, routing and customer context when connected.
Zoho Mail	RideArrivo company email and case communication.

Tool or link	Use it for
Google Maps	Route, pickup and service-location context.

4. A working day

Start of day

- Open the Omnichannel Queue and check what is waiting and what is closest to breaching its SLA.
- Read the shift handover note from the previous shift.
- Check Safety Escalation for open cases before taking new ones.

During the day

- Open Customer 360 and Live Ride Context before replying, so you answer with the real booking in front of you.
- Use Knowledge & Macros for standard answers and personalise the first line.
- Hand refunds and disputes to the right team with the Refund & Dispute Handoff; do not promise an outcome yourself.

End of day

- Write a handover note: open cases, who is waiting, and what was promised.
- Close or reassign every ticket you touched so none sits unowned.

5. Security and handling

- **Your login is yours.** Never share it, and never sign in on a shared or public computer. Use **Keep me signed in** only on a device that only you use.
- **Lock or sign out** when you step away. Use the sign-out option at the end of the day.
- **Customer and company data stays in company tools.** Do not copy it into personal email, personal cloud drives or chat apps outside RideArrivo.
- **Company Files downloads need approval.** Open documents in the workspace first. Request a download only when you truly need the original.
- **Report problems early.** A lost device, a suspicious email or a wrong access level is reported to Administration the same day.

> **For this department**
> • Safety issues are escalated at once, not queued.
> • Never read out or send full card or ID details. Ask for the minimum needed to verify the person.

6. Getting help

Ask in your department room in Chat first. For access, accounts or anything that looks wrong with the workspace itself, message Administration with a screenshot and the time it happened. If you think your account or a device has been compromised, say so at once.

Read-only guide, published by the engineering team. Version 3.0. If the app and this guide disagree, the app is right; tell Administration so the guide can be corrected.
