RIDEARRIVO INTERNAL

ROOM 7

User guide

Video meetings, guest events, and AI meeting records.

Everything you need to run and join a meeting.

October 2026. Written for RideArrivo staff. If the app looks different, the app is right; tell the admin team.

In this guide

1	What ROOM 7 is
2	Start a meeting in under a minute
3	Join a meeting with a code
4	Invite people outside RideArrivo
5	During the meeting
6	Meeting chat and notes
7	R7 AI: record a meeting in the room
8	Your meeting record
9	History, and deleting old meetings
10	Ending a meeting
11	If something goes wrong
12	Privacy and good practice

1. What ROOM 7 is

ROOM 7 is RideArrivo's own meeting space. It does audio, video and screen sharing inside the workspace, so you do not need a separate app or account. Staff sign in with their workspace login. People outside the company join through a link and never need a login.

You want to	Use
Meet colleagues online	Create ROOM 7, then share the 8 character code
Meet customers, partners or an audience	Create ROOM 7, then use Guest link and code
Capture minutes of a meeting held in a real room	Physical meeting (R7 AI)
Find what was said in a past meeting	ROOM 7 history, or the R7 AI meeting minutes list

> **Where to find it**
> Open **ROOM 7** in the left menu under COMPANY. Everything in this guide starts from that page.

2. Start a meeting in under a minute

1. Open **ROOM 7** from the left menu.
2. Under **NEW MEETING**, type a title. You can leave it blank: ROOM 7 names it with the date and time, for example "Meeting, 17 Oct 21:56".
3. Choose whether the R7 AI Note Taker should be on for this meeting.

4 Press **Create ROOM 7**. The meeting now shows under **Your current meetings** with its 8 character code.

5 Press **Join** on the meeting, or share the code first so people can arrive with you.

The code is eight letters and numbers, for example **`JS4Z6PTF`**. It is how everyone, staff or guest, finds your meeting. Send it in chat, email or WhatsApp.

> **Setting up an event first**
> If the meeting is for outside guests, you can set it up as an external event before you join. See section 4. The meeting stays quiet until you press Join.

3. Join a meeting with a code

1 Open **ROOM 7**.

2 Under **Join ROOM 7**, type the code a teammate sent you. Capitals or small letters both work.

3 Press the join button. You can join with audio only if you are on a weak connection or in a noisy place.

Meetings you created or joined before also appear under **Your current meetings** while they are still live, so you can rejoin in one click if you drop out.

4. Invite people outside RideArrivo

Guests join from a link in their browser. They type their name and email and they are in. Every guest gives an email, so ROOM 7 knows who attended.

The quick way

1 On the meeting, press **Guest link and code**. One click turns on the public page, creates the event code and opens the doors.

2 A window shows the guest link and the code, each with a Copy button.

3 Press **Copy invitation message** for ready-to-send text, or **Share on WhatsApp**. **Open guest page** lets you see what guests will see.

The guest link looks like **`room7.ridearrivo.com/r/CODE`**. Guests who arrive before you wait on the page and are let in automatically. If the guest page is already on, the room also opens by itself the moment you join.

Choose how locked it is

Option	What guests need	When to use it
Event code only (default)	Name and email	Open webinars, customer demos
Make a new passcode	Name, email and a passcode you share separately	Sensitive events. Send the passcode on a different channel from the link
Approve each guest before they enter	Guests wait until you press Admit	Small or private meetings. Admit panel appears on top of your call

Pressing **Make a new passcode** again replaces the old one: anyone who has not joined yet must use the new one. **Use the event code only** switches back. You can change these any time without breaking links you already sent.

5. During the meeting

- **Audio, video and screen share** work from the controls on the call. Allow the microphone and camera when your browser asks.
- **Admitting guests:** if approval is on, a panel appears above your call. Press **Admit** for each person.
- **Moving around the workspace:** you can leave the ROOM 7 page to check a document or another room. The call shrinks to a corner and keeps running. Open ROOM 7 again to make it full size.
- **Meeting chat** stays with the meeting. See section 6.

> **Headphones help**
> If people hear an echo, one person is playing the call through speakers into a live microphone. A headset fixes it for everyone.

6. Meeting chat and notes

Each meeting has its own saved chat and a shared notes page. They stay after the call ends, so nothing said in the chat is lost.

- Open a meeting from **ROOM 7 history** and press **Chat** to read or continue the discussion, or **Notes** to read and add notes.
- The host (the person who created the meeting) can moderate: they can remove a message from the chat. Everyone can remove their own.
- Action items from notes can be turned into tasks from the notes page.

7. R7 AI: record a meeting in the room

For meetings held face to face, **R7 AI** listens through your device's microphone, writes the transcript, and produces a summary. Use a laptop or phone placed near the middle of the table.

Before you start

1. On the ROOM 7 page press **Physical meeting** and choose to start a meeting.
2. Type a **Meeting title**.
3. Use **Add a teammate** for each colleague in the room. They can open the finished record later.
4. Choose **Show a live transcript while we talk** if you want text on screen as people speak.
5. Run the **microphone test**. It must pass before you can start. Say something and watch the bar move.
6. Choose what happens to the audio (below).
7. Tick the consent box. You are confirming that everyone in the room knows the meeting is recorded and transcribed, and agrees.

8 Press start.

What happens to the audio

Choice	Meaning
Delete after the transcript is ready (default)	The audio is removed as soon as the written record exists
Keep 7, 30 or 90 days	The audio is deleted automatically on the date shown on the record
Keep permanently	The audio is kept until someone changes the policy

The written record stays in every case. Only the audio is removed. Audio is stored privately and is not played back in the app. You can change the policy later from the meeting record.

While recording

- **Keep the ROOM 7 screen open and awake.** Locking a phone or switching apps can stop the microphone.
- **Mark moment** flags an important point, for example a decision. **Add note** attaches a short note to the timeline. Both show up in the record afterwards.
- If the microphone disconnects, recording pauses and tells you. Reconnect it and press **Resume**.
- **End meeting** stops the recording and starts the transcript. It cannot be resumed afterwards, so the app asks you to confirm. **Keep recording** backs out.

> **If the browser tab closes or the phone dies mid-meeting**
> Open ROOM 7 again and use **Recover physical meeting**. Audio saved so far is kept on the device and can be finished and sent. Do not clear browser data first.

8. Your meeting record

When the transcript is ready, the page says **Your meeting record is ready**. Until then it shows progress and updates by itself, so you can leave it open or come back later.

Part	What it gives you
Summary	A short written summary. Use Copy summary to paste it into email or chat
Transcript	What was said, split by speaker
Speakers in the transcript	Speakers appear as Speaker 1, 2 and so on. Use Rename to put the right name on each
Marked moments and notes	Everything flagged with Mark moment or Add note, in order
Audio policy	Shows when the audio will be deleted and lets the host change it
Make the transcript again	Use if the first attempt failed or looks wrong

Who can open it: the host and the teammates listed on the meeting. Guests are named in the transcript only. A branded PDF export is planned; exports will follow the same access rule as the page.

9. History, and deleting old meetings

Ended meetings appear under **ROOM 7 history**, newest first, showing the 12 most recent. Each card shows the title, code and when it ended, with three buttons.

Button	What it does
Chat	Opens the saved chat for that meeting
Notes	Opens the meeting notes
Delete	Permanently removes the meeting from history

Delete rules

- Only the person who created the meeting, or an administrator, sees the Delete button.
- Only **ended** meetings can be deleted. End a live meeting first.
- The app asks you to confirm. Deleting removes the meeting's chat, notes and attendance for everyone. It cannot be undone.
- R7 AI meeting records are separate and are **kept**. Deleting a meeting from history does not delete its transcript or summary.
- After a delete, the next older meeting moves up into the list.

10. Ending a meeting

The host can end a meeting for everyone from the meeting card or from inside the call. Anyone still in the room is disconnected and the code stops working. Meetings that sit empty also close themselves after a while. Ended meetings move to history. Everyone else simply leaves the call when they are done and the meeting carries on.

11. If something goes wrong

What you see	What to try
No sound or camera	Check the browser's site permissions (padlock in the address bar) and allow the microphone and camera. Reload the page
"Microphone access is blocked"	Allow the microphone in browser site settings, then press the test again
"No microphone was found"	Plug one in or pick another device, then test again
"ROOM 7 service is not reachable"	Check your internet and reload. If it persists, tell the admin team: the meeting service may need attention
Guest says the code does not work	Check the meeting is not ended, the doors are open, and the code or passcode was copied without spaces
Guest is stuck waiting	Approval is on: press Admit in the panel above your call, or switch the option off
Record says "Not finished yet"	The transcript is still being made. Keep the page open or come back. If it stalls, press Try again or Make the transcript again
Delete button is missing	You did not create the meeting and are not an admin, or the meeting is still live

12. Privacy and good practice

- Tell people before you record. The consent box is a legal and human courtesy, not a formality.
- Choose the shortest audio retention that works for you. The default deletes audio once the transcript exists.
- Send guest passcodes separately from guest links.
- Do not share staff links outside the company. They need a RideArrivo sign in anyway, but the code and chat history are internal.
- Delete old meetings that are no longer needed. Their chat and notes are removed with them.

Questions or something not working? Message the admin team in the workspace and include the meeting code.
